The SHA256 hash of the 2013 Q2 KSR file is:

e20491dba323dacbd74479b8d91e793d9b18d9f5348e5b984a8b150821572856
The PGP wordlist for the hash above is:

Attested on behalf of VeriSign by:

Alejandro Bolivar
Senior Engineer, Cryptographic Business Operations
VeriSign, Inc.

Insert Copy of KSR to be signed

Step	Activity	Initial	Time
29.	CA plugs FD labeled "KSR" with KSR to be signed into the laptop and waits for the O/S to recognize the FD. CA points out the KSR file to be signed then closes the file system window.	FA	22:23

Execute KSR signer

Step	Activity	Initial	Time
30.	CA identifies the KSR to be signed and runs, in the terminal window `ksrsigner Kjqmt7v /media/KSR/ksr-root-2013-q2-0.xml`	FA	22:24
31.	The KSR signer will ask whether the HSM is activated or not as below. `Activate HSM prior to accepting in the affirmative!! (y/N):` CA cofirms that the HSM is online and then enters "y" to proceed to verification. **Note: DO NOT enter "y" for the "Is this correct y/n?" yet.**	FA	22:24

Final Verification of the Hash (validity) of the KSR

Step	Activity	Initial	Time
32.	When the program requests verification of the KSR hash, CA asks the Root Zone Maintainer (RZM) representative to identify him/herself, present identification document for IW1 to retain and read out the SHA256 hash in PGP wordlist format for the KSR previously sent to ICANN. IW1 enters RZM representative's name here: Alejandro Bolivar	FA	22:26
33.	Participants match the hash read out with that displayed on the terminal. CA asks, "are there are any objections"?	FA	22:26
34.	CA then enters "`y`" in response to "`Is this correct y/n?`" to complete KSR signing operation. Sample output should look like Figure 1. The signed KSR (SKR) will be found in `/media/KSR/skr-root-2013-q2-0.xml`	FA	22:27

Print Copies of the Operation for Participants

Step	Activity	Initial	Time
35.	CA prints out a sufficient number of copies for participants using `printlog ksrsigner-20130212-*.log N` where ksrsigner-**20130212-***.log is replaced by log output file displayed by program. (this example generates **N** copies) and hands copies to participants.	FA	22:31
36.	IW1 attaches a copy to his/her script.	FA	22:31

Backup Newly Created SKR

Step	Activity	Initial	Time
37.	CA copies the contents of the KSR FD by running `cp -p /media/KSR/* .` for posting back to RZM. Confirm overwrite by entering "y" when prompted.	FA	22:32

38.	CA lists contents of KSR FD which should now have an SKR by running
	`ls -ltr /media/KSR`
	and then unmounts the KSR FD using
	`umount /media/KSR`
		FA	22:33

39.	CA removes **KSR** FD containing SKR and gives it to the RZM representative.	FA	22:33

Disable/Deactivate HSM

Step	Activity	Initial	Time
40.	CA inserts 3 cards into HSM to deactivate the unit (via "Set Offline" menu item). Type in the default PIN "**11223344**" when prompted. IW1 records the used cards below. Each card is returned to cardholder after use. CA makes sure the card(s) NOT used to activate are used to deactivate the HSM. 1st OP card 1 of 7 2nd OP card 2 of 7 3rd OP card 5 of 7 Confirm the ready light turns off.	FA	22:35

3bad0dd220813fbdeab6f9360bfa9020 -

Act. 3 Secure Hardware and Close the Ceremony

Return HSM to a TEB

Step	Activity	Initial	Time
1.	CA disconnects HSM from power and laptop (serial and Ethernet) if connected, placing HSM into a new TEB and seals.	FA	22:37
2.	CA reads out TEB # and HSM serial #, shows item to participants and IW1 confirms TEB # and HSM serial # below. **HSM1: TEB# BB24706821 / serial # K6002020** IW1 initials the TEB and keep the sealing strips for later inventory. CA places item on equipment cart.	FA	22:38

Stop Recording Serial Port Activity and Logging Terminal Output

Step	Activity	Initial	Time
3.	**Closing ttyaudit terminal window** CA terminates the HSM serial output capture by disconnecting the USB serial adaptor from laptop. CA then exits out of **ttyaudit terminal window** by typing "exit".	FA	22:39
4.	**Terminating the logging script** CA stops logging terminal output by entering "exit" in the other terminal window. This only stops the script logging and will **NOT** close window.	FA	22:39

Backup HSMFD Contents

Step	Activity	Initial	Time
5.	Set dotglob by executing `shopt -s dotglob` This allows copying everything in the original HSMFD.	FA	22:40
6.	Calculate the md5hash of the contents on the original HSMFD. `find -P /media/HSMFD -type f -print0 | sort -z | xargs -0 cat | md5sum`	FA	22:40
7.	Copy and paste the md5hash and paste it on Text Editor by going to **Applications > Accessories > Text Editor** Print two copies. One for the audit bundle and the other for the HSMFD package.	FA	22:46
8.	CA displays contents of HSMFD by executing `ls -ltr`	FA	22:46
9.	CA plugs a blank FD labeled HSMFD into the laptop, then waits for it to be recognized by the O/S (as HSMFD_); and copies the contents of the HSMFD to the blank drive for backup by executing `cp -Rp * /media/HSMFD_`	FA	22:47

Off-site audit bundle is delivered to off-site storage. **The CA holds the ultimate responsibility for finalizing the audit bundle.**	FA	02:46

All remaining participants sign out of ceremony room log and leave.

Audit Bundle Checklist:

1. Output of Signer System (CA)
One electronic copy (physical flash drive) of the HSMFD in each audit bundle, each placed within a tamper-evident bag, labeled, dated and signed by the CA and the IW1

2. Key Ceremony Scripts (IW1)
Hard copies of the IW1's key ceremony scripts, including the IW's notes and the IW's attestation. See Appendix A.1.

3. Audio-visual recordings from the key ceremony (SA)
One set for the original audit bundle and the other for duplicate.

4. Logs from the Physical Access Control and Intrusion Detection System (SA)
One electronic copy (physical flash drive) of the firewall configuration, the screenshots from the PAC-IDS configuration review, the list of the enrolled users, the event log file and the configuration audit log file in each audit bundle, each placed in a tamper-evident bag, labeled, dated and signed by the SA and the IW.

IW confirms the contents of the logs before placing the logs in the audit bundle.

5. Configuration review of the Physical Access Control and Intrusion Detection System (SA)
SA's attestation and hard copies of the screen shots and configuration audit log from the review process. See Appendix A.2.

6. Configuration review of the Firewall System (SA)
SA's attestation and hard copies of the firewall configuration from the review process. See Appendix A.3.

7. Other items
If applicable.
