How to install Regtons Registry

MySQL Server

1. Create a user with password
2. Create a database
3. Assign the created user to the created database

Configure Regtons Registry

1. Unpack `RREG.tar.gz`
2. There you will find a folder named `rreg` which contains the following files:
   a. `eppserver` (executable)
   b. `config.toml`
3. Edit the `config.toml` file with the corresponding user and password created in your database:

```
[db]
        # Database connection string.
        dsn = 'user:pass@tcp(127.0.0.1:3306)/epp'
```

Install Regtons Registry

1. Run the following command
   ```
   ./eppserver install -config config.toml
   ```

   Congratulations! Installation complete 🙂

Run Regtons Registry server

1. Run the following command
   ```
   ./eppserver &
   ```

2. Allow port 80 on firewall (or 443 if certs are set) and 700 if you want to use EPP

3. In your web browser go to http://your_ip and login with the default credentials:
   a. User: root
   b. Password: root
