Introduction

Information Warfare (IW) as defined: the use of electronic communications and the internet to disrupt a country's telecommunications, power supply, transport system, etc.

As our comprehensive study concluded, Information Warfare is not limited to electronic communications. It would be of the gravest misfortune to act on intentions that deliberately foul the idea that IW is limited to such an idea.

Information Warfare should be defined, in conclusion of MTC's study, as any information that is created, altered or factual that is passed on in any form to another party with the intent to influence the decisions made.

It is important to note that IW does NOT commit direct actions. Instead IW only influences the perceptions of others in an attempt to alter their actions.

As technological achievements continue to develop in the areas of communication, the ways in which information can be transmitted will increase along with the number of sources and recipients. These will continue to influence the developments of individuals and systems. With more exposure to sources of information, IW becomes increasingly a greater threat and weapon. Concurrently, the more individuals rely on sources of information through multiple distributors, the increase in risk of information manipulation rises.

While technology provides a better way in which to transmit our ideas and thoughts it also becomes a breeding ground for the manipulations and creation false information.

This document and further subsections outline:

- A.) 7.0.1 Manipulation
- B.) 7.0.2 Factual
- C.) 7.0.3 Chain
- D.) 7.0.4 SAC Theory
- E.) 7.0.5 Manipulation of SAC Theory
- F.) 7.0.6 Strategic Warfare Strategies
- G.) 7.0.7 Tactical Warfare Strategies
- H.) 7.0.8 Global Domination Strategies
- I.) 7.0.9 Defense Strategies
