Bee Ware introduces the first integrated solution to protect Microsoft SharePoint, Lync and Outlook Web App servers

Paris, November 7th 2013. Bee Ware introduces the first integrated solution to protect Microsoft SharePoint, Lync and Outlook Web App servers.

Bee Ware i-Suite for Microsoft Collaboration Solutions enables enterprises to secure all sites and applications created with Microsoft SharePoint. It also protects against any threat related to the usage of Lync and Outlook Web App services.

Today, more than four out of five large companies use SharePoint as their enterprise collaboration platform. But the latest Emedia study shows that 65% of these companies have no security policy in place for their SharePoint platforms and this is now one of the key vulnerabilities being exploited by malicious users.

These collaboration servers now handle such a large share of critical business information that the risks are literally skyrocketing. These include web intrusions (internal or external), unauthorized access to documents, compromised web applications or documents made unavailable.

"Microsoft SharePoint, Lync and Outlook Web App are acclaimed by enterprise users for their ease of use and their wealth of functionalities. But when two out of three companies do not secure these tools correctly, they turn into a pirate's dream: an avenue to penetrate into enterprises IT systems" says Jérôme Clauzade, Director of Product Management at Bee Ware.

Bee Ware i-Suite, a solution that instantly secures Microsoft Collaboration servers

i-Suite 5.5 for SharePoint, Lync and Outlook Web App is a unique solution that ensures the availability and integrity of documents and exchanges at any time.

i-Suite 5.5 for Microsoft Collaboration Solutions can be deployed instantly through a wide range of configuration and ready-to-use templates. Existing security policies can be easily optimized and standard environments can be secured out of the box.

"SharePoint and other Microsoft Collaboration solutions are used by more than 135 million users worldwide and securing these platforms can no longer be ignored or neglected. With i-Suite 5.5, we provide the ideal solution to protect these systems quickly and efficiently" says Jérôme Clauzade.

i-Suite 5.5 for SharePoint , Lync and Outlook Web App is available immediately from 4,990 €.

About Bee Ware :

Bee Ware is a provider of solutions for security and availability of Web applications. Bee Ware's i-Suite solution provides organizations of all sizes with the means to fight the growing threats that can impact their activity while ensuring optimum quality of service and performance.

Within a single solution, i-Suite provides an application firewall (Web Application Firewall or WAF), an XML firewall (Web Services Firewall or WSF), access control (Web Access Management or WAM) and tools for traffic monitoring and centralized management that significantly reduce deployment costs. I-Suite adapts to all types of infrastructures thanks to a complete offer in the form of appliances.

Founded in 2002, Bee Ware is present today in Europe in industry, healthcare, finance and public services.
