

Emergency Configuration Service

Bluetooth® Service Specification

- **Revision:** v1.0
- **Revision Date:** 2019-07-02
- **Group Prepared By:** PUID Working Group
- **Feedback Email:** rd-main@bluetooth.org

Abstract:

This service enables configuration and broadcasting of emergency signals to aid in locating a missing person or pet in an emergency situation.

Revision History

| Revision Number | Date | Comments |
|-----------------|------------|--|
| v1.0 | 2019-07-02 | Adopted by the Bluetooth SIG Board of Directors. |

Use of this specification is your acknowledgement that you agree to and will comply with the following notices and disclaimers. You are advised to seek appropriate legal, engineering, and other professional advice regarding the use, interpretation, and effect of this specification.

Use of Bluetooth specifications by members of Bluetooth SIG is governed by the membership and other related agreements between Bluetooth SIG and its members, including those agreements posted on Bluetooth SIG's website located at www.bluetooth.com. Any use of this specification by a member that is not in compliance with the applicable membership and other related agreements is prohibited and, among other things, may result in (i) termination of the applicable agreements and (ii) liability for infringement of the intellectual property rights of Bluetooth SIG and its members.

Use of this specification by anyone who is not a member of Bluetooth SIG is prohibited and is an infringement of the intellectual property rights of Bluetooth SIG and its members. The furnishing of this specification does not grant any license to any intellectual property of Bluetooth SIG or its members. THIS SPECIFICATION IS PROVIDED "AS IS" AND BLUETOOTH SIG, ITS MEMBERS AND THEIR AFFILIATES MAKE NO REPRESENTATIONS OR WARRANTIES AND DISCLAIM ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING ANY WARRANTIES OF MERCHANTABILITY, TITLE, NON-INFRINGEMENT, FITNESS FOR ANY PARTICULAR PURPOSE, OR THAT THE CONTENT OF THIS SPECIFICATION IS FREE OF ERRORS. For the avoidance of doubt, Bluetooth SIG has not made any search or investigation as to third parties that may claim rights in or to any specifications or any intellectual property that may be required to implement any specifications and it disclaims any obligation or duty to do so.

TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, BLUETOOTH SIG, ITS MEMBERS AND THEIR AFFILIATES DISCLAIM ALL LIABILITY ARISING OUT OF OR RELATING TO USE OF THIS SPECIFICATION AND ANY INFORMATION CONTAINED IN THIS SPECIFICATION, INCLUDING LOST REVENUE, PROFITS, DATA OR PROGRAMS, OR BUSINESS INTERRUPTION, OR FOR SPECIAL, INDIRECT, CONSEQUENTIAL, INCIDENTAL OR PUNITIVE DAMAGES, HOWEVER CAUSED AND REGARDLESS OF THE THEORY OF LIABILITY, AND EVEN IF BLUETOOTH SIG, ITS MEMBERS OR THEIR AFFILIATES HAVE BEEN ADVISED OF THE POSSIBILITY OF THE DAMAGES.

If this specification is a prototyping specification, it is solely for the purpose of developing and using prototypes to verify the prototyping specifications at Bluetooth SIG sponsored IOP events. Prototyping Specifications cannot be used to develop products for sale or distribution and prototypes cannot be qualified for distribution.

Products equipped with Bluetooth wireless technology ("Bluetooth Products") and their combination, operation, use, implementation, and distribution may be subject to regulatory controls under the laws and regulations of numerous countries that regulate products that use wireless non-licensed spectrum. Examples include airline regulations, telecommunications regulations, technology transfer controls and health and safety regulations. You are solely responsible for complying with all applicable laws and regulations and for obtaining any and all required authorizations, permits, or licenses in connection with your use of this specification and development, manufacture, and distribution of Bluetooth Products. Nothing in this specification provides any information or assistance in connection with complying with applicable laws or regulations or obtaining required authorizations, permits, or licenses.

Bluetooth SIG is not required to adopt any specification or portion thereof. If this specification is not the final version adopted by Bluetooth SIG's Board of Directors, it may not be adopted. Any specification adopted by Bluetooth SIG's Board of Directors may be withdrawn, replaced, or modified at any time. Bluetooth SIG reserves the right to change or alter final specifications in accordance with its membership and operating agreements.

1 Introduction

The Emergency Configuration Service provides a client a way to read and, optionally, configure the emergency data that will be broadcast by the server device when it is in an emergency alert state.

1.1 Conformance

If conformance to this specification is claimed, all capabilities indicated as mandatory for this specification shall be supported in the specified manner (process-mandatory). This also applies for all optional and conditional capabilities for which support is indicated.

1.2 Service dependencies

This service has no dependencies on other Generic Attribute Profile (GATT)-based services.

1.3 Bluetooth Core Specification release compatibility

This specification is compatible with Bluetooth Core Specification v5.0 or later [1].

1.4 GATT sub-procedure requirements

There are no sub-procedure requirements beyond the requirements of GATT.

1.5 Transport dependencies

This service is specified for operation over the Bluetooth Low Energy (LE) transport.

1.6 Application error codes

This service defines no Attribute Protocol Application Error Codes.

1.7 Byte transmission order

All characteristics used with this service shall be transmitted with the least significant octet first (i.e., little endian). The least significant octet is identified in the characteristic definitions in this specification.

1.8 Language

1.8.1 Language conventions

The Bluetooth SIG has established the following conventions for use of the words ***shall***, ***must***, ***will***, ***should***, ***may***, ***can***, ***is***, and ***note*** in the development of specifications:

| | |
|--------|--|
| shall | <u>is required to</u> – used to define requirements. |
| must | is used to express: a natural consequence of a previously stated mandatory requirement. OR an indisputable statement of fact (one that is always true regardless of the circumstances). |
| will | <u>it is true that</u> – only used in statements of fact. |
| should | <u>is recommended that</u> – used to indicate that among several possibilities one is recommended as particularly suitable, but not required. |
| may | <u>is permitted to</u> – used to allow options. |
| can | <u>is able to</u> – used to relate statements in a causal manner. |

| | |
|------|--|
| is | <u>is defined as</u> – used to further explain elements that are previously required or allowed. |
| note | Used to indicate text that is included for informational purposes only and is not required in order to implement the specification. Each note is clearly designated as a “Note” and set off in a separate paragraph. |

For clarity of the definition of those terms, see Core Specification Volume 1, Part E, Section 1.

1.8.2 Reserved for Future Use

Where a field in a packet, Protocol Data Unit (PDU), or other data structure is described as "Reserved for Future Use" (irrespective of whether in uppercase or lowercase), the device creating the structure shall set its value to zero unless otherwise specified. Any device receiving or interpreting the structure shall ignore that field; in particular, it shall not reject the structure because of the value of the field.

Where a field, parameter, or other variable object can take a range of values, and some values are described as "Reserved for Future Use," a device sending the object shall not set the object to those values. A device receiving an object with such a value should reject it, and any data structure containing it, as being erroneous; however, this does not apply in a context where the object is described as being ignored or it is specified to ignore unrecognized values.

When a field value is a bit field, unassigned bits can be marked as Reserved for Future Use and shall be set to 0. Implementations that receive a message that contains a Reserved for Future Use bit that is set to 1 shall process the message as if that bit was set to 0, except where specified otherwise.

The acronym RFU is equivalent to Reserved for Future Use.

1.8.3 Prohibited

When a field value is an enumeration, unassigned values can be marked as “Prohibited.” These values shall never be used by an implementation, and any message received that includes a Prohibited value shall be ignored and shall not be processed and shall not be responded to.

Where a field, parameter, or other variable object can take a range of values, and some values are described as “Prohibited,” devices shall not set the object to any of those Prohibited values. A device receiving an object with such a value should reject it, and any data structure containing it, as being erroneous.

“Prohibited” is never abbreviated.

2 Service

This section defines service declaration and behavior.

2.1 Declaration

The Emergency Configuration service shall be instantiated as a «Primary Service».

The service Universally Unique Identifier (UUID) shall be set to «Emergency Configuration» as defined in [2].

2.2 Behavior

This service does not have any behavior beyond what is described for its characteristics.

3 Service characteristics

This section defines the characteristic and descriptor requirements.

| Characteristic Name | Requirement | Mandatory Properties | Optional Properties | Security Permissions |
|---------------------|-------------|----------------------|---------------------|----------------------|
| Emergency ID | M | Read | — | Encryption |
| Emergency Text | O | Read | Write | Encryption |

Table 3.1: Emergency Configuration Service characteristics

M: Mandatory

O: Optional

3.1 Emergency ID

The Emergency ID characteristic exposes an ID for each device.

This ID shall be a static 6-octet value to identify the device during alerting. The ID shall be the first 48 bits of a 128-bit random number generated using the requirements for random generation defined in the Bluetooth Core Specification [Vol 2] Part H, Section 2 [1]. The random number used for the ID should not be used for any other purpose by the device. The static Emergency ID can be generated during manufacturing or when power is first applied to the device.

3.1.1 Characteristic behavior

This characteristic is static over the lifetime of the device.

3.2 Emergency Text

The Emergency Text characteristic shall be a variable-length string consisting of 1 to 20 octets with no string termination character. Encoding shall be UTF-8.

The actual string content is use case dependent.

This characteristic will typically hold information (such as a name or phone number) that is human-readable by someone receiving an emergency signal on their device.

3.2.1 Characteristic behavior

The Emergency Text characteristic shall return its associated value when it is read.

If the Emergency Text characteristic is writable, it may be written by a client device that wants to configure the emergency alerts of the server device.

4 Acronyms and abbreviations

| Acronym/Abbreviation | Meaning |
|----------------------|------------------------------------|
| GATT | Generic Attribute Profile |
| LE | Bluetooth Low Energy functionality |
| RFU | Reserved for Future Use |
| UUID | Universally Unique Identifier |

Table 4.1: Acronyms and abbreviations
