

**RDRS System Development Update Webinar #1**  
**16 May 2022 (13:00-14:30 UTC)**  
**Question and Answer (Q&A) Pod**

<b>Question</b>	<b>Answer</b>
Does the system support domain names in both utf-8 format and puny-code ?	Yes, the system supports puny-code and utf-8.
What if LEA are making the request directly? Will they still have to attach a PDF file ?	If a law enforcement authority is making a request directly to a registrar, working outside the RDRS, the representative must submit whatever is required by the registrar to consider the request.
Will the document specifications be displayed in the interface ? Or will there be a warning if the document is not the right type or too big ?	Both. We can add attachment requirements on the UI, and there will be an error message if that file size is too big or type not supported.
Will there be a capability to upload a request instead of typing it in interactively?	No, a requestor must fill out the system's form with the relevant details for each request. Any relevant attachments can be included with the request via the system.
On the legal basis, are there only GDPR related legal basis?	At this time, the system includes legal basis as outlined in the GDPR but there is an option to select other applicable law (non-GDPR) legal basis in the drop down and provide with an explanation on what the legal basis would be.
