DCB status

13 March 2012

Pat Thaler

P802.1Qbg

- Recirculation completed
  - Only comment: "…meets all editorial requirements"
- Response rate: 90% returned, 6% abstention
  - 73 in ballot group, 66 votes received, 4 abstain
- Approval rate: 100%
  - 62 affirmative votes
- Requesting approval for RevCom submission

P802.1BR

- Recirculation completed with 5 comments
  - "…meets all editorial requirements"
  - 4 minor editorial – will submit to IEEE staff editor for consideration in preparing for publication
- Response rate: 91% returned, 6% abstention
  - 71 in ballot group, 65 votes received, 4 abstain
- Approval rate: 100%
  - 61 affirmative votes
- Requesting approval for RevCom submission

Network Virtualization Overlay

- IETF BOF in March
  - Has proposed charter, draft problem statement and draft requirements document (see minutes for relevant links)
  - 802.1Qbg VDP is very close to the described requirement for a VN (virtual network) attach/detach protocol
    - Might be useful to define additional filter info formats for the VDP association TLV
    - There was interest in pursuing this if IETF charters NVO work.

Future meetings

- All DCB projects are complete
  - assuming RevCom submission of 802.1Qbg and 802.1BR succeeds
- Asking for two interim teleconferences
  - To discuss any proposed new work
  - 30+ days before May and July meetings to help in planning any task group time at them
