Dear colleagues,

Further to our earlier communications, we would like to provide you with some updated information regarding the IEEE P802.1CQ project.

As we notified you in our statement of July 20, 2020, IEEE P802.1CQ/D0.5 was circulated for Task Group Ballot during July. The draft included a reproduction of MAAP from IEEE Std 1722, as previously proposed and discussed.

We appreciate the participation of some of your Working Group's participants in the Task Group Ballot. As a result of the discussions, decisions have been made to revise the draft in such a way that MAAP is now the basis of many of the enhancements under development in the project.

At this time, we are enclosing the IEEE P802.1CQ Draft <tbd> for review by your participants and request that it be stored for IEEE 1722 Working Group use with password-protected access. This draft is currently under review in a further IEEE 802.1 Task Group ballot that opened <date> and closes <date>. Any comments would be welcome. Note that the IEEE 802 work is open, and contribution driven. Participation is on an individual basis and technical discussion can be conducted based on individual contributions. The TSN Task Group holds regular electronic meetings; details are available via the TSN Task Group page http://www.ieee802.org/1/tsn.

Respectfully submitted,
Glenn Parsons
Chair, IEEE 802.1 Working Group
