Comments on P802.15 PARs & CSDs

From 802.1

Slide 1

CSD

Compatibility

a) Will the proposed standard comply with IEEE Std 802, IEEE Std 802.1AC and IEEE Std 802.1Q?

YES. As part of the last revision, the standard has been converted to use 48bit MAC addressing rather than 64 bit MAC addressing. IEEE Std. 802.15.3 includes a reference priority mapping using IEEE Std. 802.1D-2004. IEEE Std. 802.1D-2004 is being withdrawn. This revision will change the reference priority mapping to use IEEE Std. 802.1Q

- Please clarify (and include if necessary) if there are any potential interoperability concerns with respect to frame size.
