

# 60802 Digital Datasheet Clarification

Version V02 – July 2023

Martin Mittelberger (Siemens AG)

# Original Text in D2.0

## • 5.5.6 → |A-station requirements for digital data sheet|

For IA-stations for which a claim of conformance to this document is made a shall:¶

– → Provide a 60802 YANG module as according to 6.7.8 in the form of an XML file containing the instance data set according to IETF RFC 9195. A manufacturer may reduce the instance data set by removing private YANG modules and/or statistical config-false YANG nodes.¶

NOTE This includes all YANG modules required by this document, as well as all additional modules that have been added by the manufacturer.¶

- Obviously the term „60802 YANG module“ caused some confusions
- To avoid future confusions this term should be replaced by „60802 YANG instance data file“

# Solution 1 for specification of relevant data

- Add a sentence: „The instance data file shall contain at least the following YANG nodes:“
- Add a block of required nodes (an exact copy, but unnecessary nodes removed) of 6.7.9

This represents the solution we discussed yesterday

# Solution 2 for specification of relevant data

- Add a sentence: „The instance data file shall contain at least the YANG nodes of 6.7.9 that are not marked with <td>“
- Mark all required nodes in of 6.7.9

This represents the solution we discussed earlier

# Which Solution is wanted?
