802.11 comments on the PAR modification and their resolution

- Comment:
8.1 Does not explain the change in the PAR. Please add.
- Response:
Add the following text to 8.1:
#5.2 The Remote Procedure Calls (RPCs) provided by the YANG modules of the base standards cited by IEC/IEEE 60802 are not satisfactory for industrial automation use cases. Therefore, the IEC/IEEE 60802 TSN Profile for Industrial Automation will specify RPCs for industrial automation.

802.11 comments on the PAR modification and their resolution – cont'd

- Comment:
5.2 suggest changing to remove passive voice of new sentence:
Change ” This document also specifies YANG modules defining read-only information available online and offline as a digital data sheet. Existing YANG modules **are** extended to define remote procedure calls and actions addressing requirements arising from industrial automation networks.”
- To “This document specifies YANG modules defining read-only information available online and offline as a digital data sheet. The document also specifies YANG modules for remote procedure calls and actions to address requirements arising from industrial automation networks.”
- Response:
Make the change applying ISO/IEC Directives Part 2, which applies to this dual-logo document. Change the last two sentences to read: “This document specifies YANG modules defining read-only information available online and offline as a digital data sheet. This document also specifies YANG modules for remote procedure calls and actions to address requirements arising from industrial automation networks.”

- Comment:
Typos in title on posted document : should be “draft”, “modification”.

- Response:
Fix it.
