SG 13 would like to thank the IETF CCAMP WG for your liaison replies in the area of L1VPNs, informing us about your recent progress on this subject, as well as the new mailing list creation.

Thank you for your review of the ITU-T documents on service level requirements and framework for L1VPNs, now published as Y.1312 (Layer 1 Virtual Private Network Generic Requirements and Architecture Elements) and Y.1313 (Layer 1 Virtual Private Network service and network architectures).

We are aware that these service level requirements and framework have been summarized in the Internet-Draft draft-takeda-l1vpn-framework, and that work is ongoing in the IETF community to assess the suitability of existing IETF protocols to meet the requirements within the context of the framework. We appreciate and would definitely like to continue our collaboration with the IETF on this subject so that, following the analysis of the suitability of the existing IETF protocols for L1VPN service delivery, any necessary protocol extensions are appropriately accomplished within the IETF.

Please continue to keep us informed about your progress in the area of L1VPNs.
Our next meeting is planned for August 25 – September 9 2005 in Geneva.
