Subject: IETF YANG Models of Interest to Broadband Forum

Date: 13 July 2017

Communicated By: David Sinicrope <david.sinicrope@ericsson.com>

Dear All,
The Broadband Forum is progressing work defining the Common YANG modules for Broadband Forum specified access network equipment (i.e. Access Nodes and FTTdp DPUs). As part of this work, we intend to define a framework for alarm and event management and aim to reuse existing work done by other SDOs where possible.

To that extent we have a specific interest in draft-vallin-netmod-alarm-module and have been discussing its applicability to the Broadband Forum Common YANG project at our recent Q2 meeting (May 15-18, 2017) .
We also understand that this draft has recently been moved to the CCAMP WG. We would like to express our interest in progressing this draft.
Similarly, we would like to state our specific interest in the YANG Data Model specified in draft-ietf-netmod-entity; this has been used in our Common YANG specification.
While this liaison expresses BBF interest in these drafts, our members plan to participate in the work to progress the drafts within the IETF, according to the IETF process.
We would appreciate it if you could keep us informed of your further plans.

Sincerely

Michael Fargano
Broadband Forum Technical Committee Chair
