**Subject:** LS on information about BBF's release of technical report on network slicing management

Dear Colleagues,

The Broadband Forum (BBF) would like to inform you about the release of Technical Report TR-522 on Network Slicing Management Interface in 5G network context.

This standard specifies the interface between 3GPP management system and transport network manager, refers to Mobile-transport network slicing instance Management Interface (MMI). The focus of this standard is to formulate the MMI interface specification to enable 5G Network Slices across mobile and transport domains in broadband networks, the scope of which includes attributes that should be supported by MMI interfaces for configuration, monitoring and performance assurance for network slicing, and operations parameters and functional requirements for MMI interfaces in support of 5G Network Slices with specific customers' SLA requirements.

This specification is referenced for your information. See

<https://www.broadband-forum.org/technical/download/TR-522.pdf>

We look forward to continuing the productive cooperation with you.

Sincerely,  
Lincoln Lavoie,  
Broadband Forum Technical Committee Chair
